Introduction

Scope of the Databook

This is the fourth edition of the World Health Databook from Euromonitor International and presents a wealth of up-to-date statistical information on health across 71 countries worldwide. The databook aims to provide insight into the health of each nation and includes detailed data on life expectancy, health expenditure, healthcare infrastructure and services, incidence of infectious diseases and immunisation, causes of death, and lifestyle health issues such as obesity, nutrition and prevalence of smoking.

The data contained in this publication are presented in spreadsheet form and arranged in four sections covering socio-economic parameters, comparative world rankings, and cross-country and country-specific trends. Value data in the rankings and cross-country sections are presented in US dollars in order to facilitate comparisons and the easy identification of trends and developments. Exchange rates used for converting national currencies are shown in the following table.
